

Licensing Policy for BioLink SDK

BioLink Solutions, a credible provider of advanced fingerprinting technologies, is happy to offer its Partners and Customers the result of many years' effort and investment into the development of biometrics. BioLink's progress and achievements along with patented fingerprint identification technology are applied to the software development kit – **BioLink SDK**.

This product is designed for Windows 95C/98/Me/NT/2K/XP/2003 and targeted at developers of applications requiring strong user authentication. The advantage of *BSDK* over other manufacturers' products is that it provides for smooth and efficient integration of progressive fingerprinting into the newly created solutions without thorough penetration into biometrics by way of including high-level API for biometric functions call.

As with other high-value products, *BSDK* follows a Licensing Policy safeguarding the Company's software against unauthorized copying and use. The distribution by the third parties of the software using the *BSDK* redistributable components requires payment of fees in behalf of BioLink.

Licensing Policy for *BSDK* involves two types of licenses: Developer and End-user licenses. These are supplied to Partners or Customers on USB dongles (standard package).

I. BSDK Developer License

A Developer License provides a Customer with a right to develop and test an application using the *BSDK* components in non-production environment. The standard *BSDK* package or within-the-version update includes Two (2) Developer Licenses.

Developer Licenses can be supplied in one of the following ways:

- On separate USB dongles at the End-user License price (standard package)
- On a network USB dongle

- In the firmware of MatchBook 3.5 devices (order them separately and specify the product part number FPS-MB35-EUL)
- Via activation with the provided serial number.

BioLink reserves the right to decline the Developer Licenses prolonging in case of infringement by the Customer of any terms specified herein or in accompanying the *BSDK* License Agreement.

II. BioLink SDK End-user License

An End-user License permits a Customer to use the *BSDK* components in commercial environment as part of the newly developed application.

One End-user License should be purchased for EACH installed copy of the third-party software using the *BSDK* redistributable components and ordered separately.

End-user Licenses can be supplied in one of the following ways:

- On separate USB dongles (standard package)
- On a network USB dongle
- In the firmware of MatchBook 3.5 devices (order them separately and specify the product part number FPS-MB35-EUL)
- Via activation with the provided serial number.
